Geodesic
equation

- GR - “Relativistic field theory of Gravity”
- “Spacetime tells matter how to move; matter tells spacetime how to curve” - John Wheeler

$$\underbrace{R_{\mu\nu} - \frac{1}{2}Rg_{\mu\nu}}_{\text{Telling matter how to move}} = \underbrace{\frac{8\pi G}{c^4} T_{\mu\nu}}_{\text{Telling spacetime how to curve}}$$

The equation is annotated with green handwritten text: “Metric tensor” is written above the left-hand side, and “Matter” is written above the right-hand side.

$$R_{\mu\nu} - \frac{1}{2}R g_{\mu\nu} = \kappa T_{\mu\nu}$$

General relativity

Special relativity

$$R_{\mu\nu} - \frac{1}{2}R g_{\mu\nu} = \kappa T_{\mu\nu}$$

General relativity

- $g_{\mu\nu}$ is anything that solves the EE for a particular $T_{\mu\nu}$

Special relativity

$$R_{\mu\nu} - \frac{1}{2}R g_{\mu\nu} = \kappa T_{\mu\nu}$$

General relativity

- $g_{\mu\nu}$ is anything that solves the EE for a particular $T_{\mu\nu}$

Special relativity

- $g_{\mu\nu} = \eta_{\mu\nu} = (-1, +1, +1, +1)$ for $T_{\mu\nu} = 0$

$$R_{\mu\nu} - \frac{1}{2}R g_{\mu\nu} = \kappa T_{\mu\nu}$$

General relativity

- $g_{\mu\nu}$ is anything that solves the EE for a particular $T_{\mu\nu}$
- $\frac{d^2 x^\mu}{d\tau^2} + \Gamma^\mu_{\nu\sigma} \frac{dx^\nu}{d\tau} \frac{dx^\sigma}{d\tau} = 0$

Special relativity

- $g_{\mu\nu} = \eta_{\mu\nu} = (-1, +1, +1, +1)$ for $T_{\mu\nu} = 0$

$$R_{\mu\nu} - \frac{1}{2}R g_{\mu\nu} = \kappa T_{\mu\nu}$$

General relativity

- $g_{\mu\nu}$ is anything that solves the EE for a particular $T_{\mu\nu}$

$$\frac{d^2 x^\mu}{d\tau^2} + \Gamma^\mu_{\nu\sigma} \frac{dx^\nu}{d\tau} \frac{dx^\sigma}{d\tau} = 0$$

Special relativity

- $g_{\mu\nu} = \eta_{\mu\nu} = (-1, +1, +1, +1)$ for $T_{\mu\nu} = 0$

$$\frac{d^2 x^\mu}{d\tau^2} + \Gamma^\mu_{\nu\sigma} \frac{dx^\nu}{d\tau} \frac{dx^\sigma}{d\tau} = 0, \text{ as } \Gamma^\mu_{\nu\sigma} = 0$$

$$R_{\mu\nu} - \frac{1}{2}R g_{\mu\nu} = \kappa T_{\mu\nu}$$

General relativity

- $g_{\mu\nu}$ is anything that solves the EE for a particular $T_{\mu\nu}$
- $\frac{d^2 x^\mu}{d\tau^2} + \Gamma^\mu_{\nu\sigma} \frac{dx^\nu}{d\tau} \frac{dx^\sigma}{d\tau} = 0$

Special relativity

- $g_{\mu\nu} = \eta_{\mu\nu} = (-1, +1, +1, +1)$ for $T_{\mu\nu} = 0$
- $\frac{d^2 x^\mu}{d\tau^2} + \Gamma^\mu_{\nu\sigma} \frac{dx^\nu}{d\tau} \frac{dx^\sigma}{d\tau} = 0$, as $\Gamma^\mu_{\nu\sigma} = 0$
- Mainly because $\frac{dx^\mu}{d\tau} = c$

$$R_{\mu\nu} - \frac{1}{2}R g_{\mu\nu} = \kappa T_{\mu\nu}$$

General relativity

- $g_{\mu\nu}$ is anything that solves the EE for a particular $T_{\mu\nu}$
- $\frac{d^2 x^\mu}{d\tau^2} + \Gamma^\mu_{\nu\sigma} \frac{dx^\nu}{d\tau} \frac{dx^\sigma}{d\tau} = 0$

Special relativity

- $g_{\mu\nu} = \eta_{\mu\nu} = (-1, +1, +1, +1)$ for $T_{\mu\nu} = 0$
- $\frac{d^2 x^\mu}{d\tau^2} + \Gamma^\mu_{\nu\sigma} \frac{dx^\nu}{d\tau} \frac{dx^\sigma}{d\tau} = 0$, as $\Gamma^\mu_{\nu\sigma} = 0$
- Mainly because $\frac{dx^\mu}{d\tau} = c$

Conclusion

Special relativity is just really a "special" case of GR. ($\nabla_\mu \rightarrow \partial_\mu, g_{\mu\nu} \rightarrow \eta_{\mu\nu}$)

- The **motion of a test particle** are governed by the **geodesic equation** ($\ddot{x}^\mu + \Gamma_{\nu\rho}^\mu \dot{x}^\nu \dot{x}^\rho = 0$) : Dot is differentiation with respect to proper time
- The RHS of this equation is zero for **free-fall objects in gravity**.

- What would happen if we have free fall gravity + electrodynamics force?

$$\ddot{x}^\mu + \Gamma_{\nu\rho}^\mu \dot{x}^\nu \dot{x}^\rho = \frac{q}{m_0} F_{\nu}^{\mu} \dot{x}^\nu$$

$$\ddot{x}^\mu = 0 \quad (\text{SR}) \text{ No grav}$$

$$\ddot{x}^\mu + \Gamma_{\nu\rho}^\mu \dot{x}^\nu \dot{x}^\rho = 0 \quad (\text{GR})$$

What is GR?

Have I had a small taste of it before?

Breaking GR into two parts

Crash course Geodesic equation

Recall

- **Principle of least action** $\rightarrow S[x^i(t)] = \int_{t_1}^{t_2} dt L(x^i(t), \dot{x}^i(t))$ (Remember : A functional)

A Geodesic equation you have seen before

Recall

- **Principle of least action** $\rightarrow S[x^i(t)] = \int_{t_1}^{t_2} dt L(x^i(t), \dot{x}^i(t))$ (Remember : A functional)
- If you see how the action changes for a *small perturbation* in the path $\rightarrow x^i(t) \rightarrow x^i(t) + \delta x^i(t)$
Keep the end points fixed $\rightarrow \delta x^i(t_1) = \delta x^i(t_2) = 0$

A Geodesic equation you have seen before

$$F = m\ddot{x} = -\frac{\partial V}{\partial x}$$

Recall

- **Principle of least action** $\rightarrow S[x^i(t)] = \int_{t_1}^{t_2} dt L(x^i(t), \dot{x}^i(t))$ (Remember: A functional)
- If you see how the action changes for a *small perturbation* in the path $\rightarrow x^i(t) \rightarrow x^i(t) + \delta x^i(t)$
Keep the end points fixed $\rightarrow \delta x^i(t_1) = \delta x^i(t_2) = 0$
- Now if you compute $\delta S \rightarrow$ You will get the **Euler Lagrange equations**

$$\frac{\partial L}{\partial x^i} = \frac{d}{dt} \left(\frac{\partial L}{\partial \dot{x}^i} \right)$$

1D: $L = \frac{1}{2} m \dot{x}^2 \rightarrow$

Free particle

$$\dot{x} = \frac{dx}{dt}$$

Geodesic eqⁿ $\frac{\partial L}{\partial x} = \frac{d}{dt} \left(\frac{\partial L}{\partial \dot{x}} \right)$

$$m\ddot{x} = 0 \rightarrow$$

for a particle in flat space with no force acting on it.

$$0 = \frac{d}{dt} \left(\frac{1}{2} m \dot{x} \right) = m \ddot{x}$$
